DIGITAL LITERACY PROJECT REPORT

Title Page

Name: Gaurav Kumar
Reg. No.: 25BSA10169
Branch: B.Tech CSE (Cloud Computing and Automation)
Year: 1st Year
Course Code: CSE0001
Date: 29/03/2026

Introduction

I have prepared this project based on the concept of digital literacy, which is very important for students in today's digital world. As a student digital ambassador, I have made this project in order to understand how to use digital tools effectively, communicate professionally, and stay safe online. This project includes different tasks like creating an infographic, building a digital portfolio, exploring online platforms, writing professional emails, and writing a case study on cybercrime awareness. Through this project, I learned about various platforms such as GitHub and LinkedIn, and also understood the importance of online safety and communication. Overall, this project helped me improve my digital skills and made me more aware of responsible internet usage.

Task 1

I checked all the mentioned tools but I chose Canva because I found it simple to use and provides many templates and design elements. I also used its AI feature to generate a base design and then customized it according to my requirements. My infograph explains the concept of digital literacy in a clear and simple way. It include topics like what digital literacy means, useful tools for students, online safety practices, building a professional online profile, and email etiquette. I used graphic and vibrant colours in order to make it appealing. However, I found it a bit difficult to adjust all the content in a single page without making it look crowded. Overall, it was a interesting experience.

Task 2

In this task, I have created my digital presence on platforms like GitHub, LinkedIn, and Kaggle. These platforms are useful for building a professional profile and showcasing professional acknowledgements. On GitHub, I have created my profile README and added basic details. On LinkedIn, I updated my education details and created a professional profile. Also, Kaggle is useful for learning data science and practicing problems. For the next four years, I have a plan to regularly update these platforms by adding projects, certifications, and

achievements. These platforms might help me in internships and placements. This task helped me understand the importance of maintaining a professional digital identity.

Task 3

For this task, I used HackerRank to solve some coding problem and earned a certificate, Also, posted it on linkedIn. It helped me understand basic problem-solving and gave me confidence to practice more coding questions. I also created a quiz using Google Forms. The form included five questions related to digital literacy, including multiple choice and short answer questions. I also viewed the responses in Google Sheets. This task was helpful because it introduced me to a new platform that can be used for both learning and collaboration. HackerRank helps in improving coding skills, while Google Forms can be used for surveys and quizzes. These tools will be useful in academics and group projects.

Task 4

I have written two E – mails in order to demonstrate how poor digital communication can create serious problems. For example, if a student sends an email without a proper subject or uses an informal tone, the message may be ignored or misunderstood. This can affect deadlines or opportunities like internships. In such situations, it is important to follow proper email etiquette, such as writing a clear subject, using polite language, and structuring the email properly. Also re - checking before sending is also important to avoid mistakes. This task helped me understand how to communicate professionally in academic and professional environments.

Task 5

While understanding cybercrime, I was surprised to see how common UPI frauds have been occurring so frequent and how easily people are getting tricked. Many people are not even aware that they should never share their UPI PIN or OTP. One habit I will change is being more careful while making online payments. I will always verify payment requests and avoid clicking on unknown links. This task made me more aware of online risks and the importance of digital safety.

Conclusion (100 words)

In a nutshell, this project helped me in understanding the importance of digital literacy in student life. I learned how to use different digital tools, create a professional online presence, and communicate properly through emails. I also gained knowledge about cyber safety and how to protect myself from online frauds. Overall, this project improved my confidence in using digital platforms and made me more responsible while using the internet.
